

PRATHAMESH RAJESH BAWANE

Java Backend Developer

Pune, Maharashtra | +91-9021585662 | bawaneprathamesh0@gmail.com

GitHub: github.com/Pratham1801 | LinkedIn: [linkedin.com/in/prathamesh-bawane](https://www.linkedin.com/in/prathamesh-bawane)

PROFESSIONAL SUMMARY

Java Backend Developer (Fresher) with a strong foundation in Data Structures, Object-Oriented Programming, Operating System concepts, and System Programming. Hands-on experience building RESTful backend applications using Spring Boot and designing scalable solutions with Microservices architecture. Proficient in Linux system internals, database integration, and performance-oriented programming through multiple industry-oriented projects. Passionate about building secure, optimized backend systems.

TECHNICAL SKILLS

Programming Languages: Java, C, C++, JavaScript

Frameworks & Backend: Spring Boot, Spring Framework, Hibernate (JPA), REST APIs, Microservices

Databases: MySQL, MongoDB, Oracle SQL

Web Technologies: HTML5, CSS3, JavaScript

Tools & Platforms: Git (GitHub), GitHub Actions (CI/CD basics), IntelliJ IDEA, VS Code, Linux (Ubuntu), Apache Tomcat

Core CS Concepts: Data Structures & Algorithms, OOP, Operating System Internals, System Programming, Computer Networks

Testing & Debugging: Unit Testing, Debugging Techniques, Log Analysis

TECHNICAL PROJECTS

EduTrack — Classroom & Student Management Portal | *Java, Spring Boot, MongoDB, REST APIs*

- Developed RESTful backend services for managing student records and batch operations.
- Implemented RESTful CRUD APIs with NoSQL database integration.
- Designed modular, microservice-ready architecture for scalability and maintainability.

Concurrent FTP Server | *C, Socket Programming, Multithreading*

- Built a multi-client FTP server using POSIX threads and TCP socket communication.
- Implemented concurrent file transfer handling and server resource management.

File Packer & Unpacker with Encryption | *Java, Cryptography*

- Designed a secure file archiving utility with encryption and metadata preservation.
- Implemented compression logic and file integrity validation; built GUI using Java Swing.

Chat Messenger with Logging Facility | *Java, Socket Programming*

- Developed a real-time client-server messaging system using TCP sockets.
- Implemented timestamp-based logging for message history and chat tracking.

Process Memory Inspector | *C, Memory Management*

- Analyzed the virtual memory layout of running processes on Linux.
- Visualized stack, heap, data, and shared library memory segments.

Customised Virtual File System (CVFS) | *C, Operating System Concepts*

- Simulated Linux-like file system operations using custom shell commands.
- Designed inode-based internal architecture and file handling logic.

Kernel Interface Utility Suite | *C, Linux System Programming*

- Developed utilities to monitor running processes and system resources using the /proc filesystem.
- Extracted CPU, memory, and process statistics from Linux kernel interfaces.

Generalised Data Structures Library | *C++*

- Developed reusable, template-based implementations of linear and non-linear data structures.
- Implemented stack, queue, linked list, binary tree, and searching/sorting algorithms.

Marvellous Study Tracker App | *Java*

- Developed a console-based study activity tracking application with CSV export functionality.
- Applied object-oriented design principles for modular development.

EDUCATION

M.Sc. Computer Application

Savitribai Phule Pune University, Pune — Currently Pursuing

Bachelor of Computer Application (BCA)

Sant Gadge Baba Amravati University, Amravati — Graduated 2024 | CGPA: 6.64 / 10

HSC — Maharashtra Board

2020 — 50.77%

SSC — Maharashtra Board

2018 — 71.20%

ADDITIONAL STRENGTHS

- Strong problem-solving and analytical ability
- Active GitHub contributor with well-documented, industry-level projects
- Quick learner with adaptability to new technologies
- Good understanding of backend architecture and system-level programming
